Back in up position and seat in reverse tilt position.

Back in up position and seat in forward tilt position.

The TRC 750 Chair

An alternative choice for tilt and recline positioning. Separate manual hand levers individually control pneumatic cylinders that enable the reclining back and seat tilt to function independently. The metal seat pan surface will accommodate a seat cushion measuring 28" wide by 20" deep. Front riggings are available in footrests or elevating leg rests. Optional full width foot board and padded leg support, 4" foam seat cushion and 4" foam/gel cushion are available.

Specifications:

28" seat width

20" seat depth

Seat pan to floor: 16.25"

Back angle: upright / full recline 10-36 degrees

Seat tilt forward: 5 degrees

Seat tilt reverse: 22 degrees

Weight capacity: 750 pounds

Casters: two rear locking

Two sets of levers control back recline and seat tilt, while adjustable straps allow upholstery to conform to the user.

Back in full recline position and seat in reverse tilt position.

Bariatric Patient Room Seating

Portable wheeled bariatric patient recliner chair features reclining back and leg rest that elevates when the back is reclined. The back can be positioned from full upright to fully reclined. Two models available: 29.25" seat width and 25.25" seat width. Both feature 850 pound weight capacity. Recline mechanism is located at the rear of the chair for attendant access.

Contact us for upholstery color choices.

Model 7150 29.25" seat width

Model 7155 25.25" seat width

Maxi Care Bariatric Patient Lift

When transferring the bariatric patient safety is first for the patient and caregiver. The hand pendant controls base leg extension and widening for stability. Lifting, transferring left and right and lowering the patient are also hand pendant controlled. The actuator controlling raising/lowering features a manual release to lower the patient in the event of power loss. Three models feature 700, 800 and 1,000 pound weight capacities. Each is available with optional weighing scale.

Measuring Proper Fit & Wheelchair Construction

(For a detailed measuring guide and product order form visit www.gendroninc.com)

1. Seat distance from floor (Seat Height) _____
 2. Depth of seat from front to rear (Seat Depth) _____
 3. Overall width of seat (Seat Width) _____
 4. Seat to top of back (Back Rest Height) _____
 5. Seat to top of armrest (Armrest Height) _____
- Back Angle (degrees)
If the seat plane is not parallel to the floor. Indicate the distance from the front and rear of seat to floor.
 - Front Edge to Floor
 - Rear Edge to Floor

Please check for environmental access restrictions.
Tell us the maximum overall width, wheel to wheel, to ensure passage through doorways, ramps, etc.

Gendron recommends that specifications to build each wheelchair be supplied by a physician, physical therapist or other qualified medical professional.
